DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3,6-7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Sammler et al (US 6,544,216).

Regarding claims 1,5,Sammler discloses an intracardiac pumping device[see title] for percutaneous insertion, comprising a pump (10) connected at the proximal end with a catheter (17) and at the suction-side distal end with a canula (14a,14b) having inlet openings remote from the pump (10)[see figures 4-5], characterized in that a flexible projection is provided at the canula distal of all of the inlet openings, wherein said flexible projection (46,48)[col.5,line 6] is capable of forming a spacer for keeping said inlet openings spaced apart from adjacent heart walls[see figures 4-6].

Regarding claim 2, the projection (46 or 48) is a non-sucking projection [see fig.4-5].

Art Unit: 3766

Regarding claim 3, the projection (46 or 48) is a hollow hose whose lumen is in communication with that of the canula (14b)[see fig.4-5].

Regarding claim 4,flexible catheter 48 acts a pigtail tip[see col.5,lines 4-7;fig.5] Regarding claim 6, the projection (46,48) has an outer diameter that is smaller than that of the canula (14a,14b)[see fig.4-5].

Regarding claim 7, the canula (14a,b) has a preformed bend[see fig.4-5].

Regarding claim 9, the projection (48) has lateral auxiliary openings (52)[see fig.4-6].

Claim Rejections - 35 USC § 103

3. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sammler et al (US 6,544,216) as applied to claim1 above. Sammler discloses the invention as claimed but failed to disclose a guide wire provided in the leads through the pump and is adapted to be advanced from the canula into the hollow projection. However, guide wire is notoriously known in the art for use in lead for navigating through tissue during implantation of a lead. Thus, it would have been obvious to have a guide wire provided in the leads through the pump and adapted to be advanced from the canula into the hollow projection in order to facilitate easy navigation of the pump into the target tissue.

Response to Arguments

4. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 3766

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROLAND DINGA whose telephone number is (571)270-3644. The examiner can normally be reached on Monday through Friday from 8:30am to 5:00pm EST..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl H. Layno can be reached on 571 272 4949. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
